

sift_ransacmatch - Extract the SIFT feature in two image, matches the inliers with the RANSAC algorithm, and return the Homography Matrix

Usage: [H] = sift_ransacmatch(im1, im2)

Given two image im1 and im2 the function return the Homography Matrix computed extracting and matching the SIFT feature in the two images and

Input: im1 - Image 1, it can be in any format
Im2 - Image 2, it can be in any format

Output:
H - 3x3 Homography Matrix
